TOAN BAN LE

BACKEND DEVELOPER FRESHER

0393146946 letoanban.word@gmail.com Thu Duc City, Ho Chi Minh City

SUMMARY

Final-year IT student focused on Backend Development. Experienced in building RESTful APIs with Node.js (Express, NestJS), implementing authentication and role-based authorization, and handling background jobs using Redis/Bull.

EDUCATION

HUTECH UNIVERSITY 2022 - 2026

Information Technology

GPA: 3.40/4.00

TECHNICAL SKILLS

Languages: JavaScript (ES6+), PHP, TypeScript, Python.
Frontend Development: React.js, Next.js, HTML5, CSS3, Bootstrap 5.
Databases & Storage: MySQL, MongoDB, Redis, MinIO (Object Storage).
Backend Development: Node.js (Express, NestJS), Laravel.
Tools & Platforms: Docker, Git, Postman, Socket.IO, Stripe API.

PROJECTS

TaskFlow - Personal Project -

GitHub Link: https://github.com/ToanBan/TaskFlow

Built a video streaming system supporting background processing and adaptive streaming via HLS.

- Designed RESTful APIs with NestJS and implemented an asynchronous pipeline using Redis/Bull Queue to handle video transcoding via FFmpeg.
- Managed video lifecycle and secured system with Role-Based Access Control, using MinIO for scalable object storage.
- Set up MySQL, Redis, and MinIO with Docker Compose for local development and integrated React with hls.js for adaptive playback.

Technologies: Node.js (NestJS), Prisma ORM, MySQL, Redis (Bull), FFmpeg, MinIO, React, hls.js, Docker.

CourseBase Website - Team Project -

GitHub Link: https://github.com/ToanBan/DoAnChuyenNganh

Led a team to build an online learning platform for Students, Instructors, and Admins, focusing on backend architecture.

- Designed RESTful APIs using Node.js and TypeScript, featuring secure role-based authorization for all user types.
- Developed core features: real-time messaging, course management, progress tracking, and QR-verified PDF certificates.
- Implemented AI-driven recommendations and learning behavior analysis using Cosine Similarity.

Technologies: Node.js (Express), Next.js, TypeScript, Python, MySQL, WebSocket, JWT, Redis.

SnapMartWebsite - Personal Project -

GitHub Link: https://github.com/ToanBan/SnapMartWebsite

Built a social commerce platform combining social networking features with e-commerce functionality, supporting users, businesses, and administrators.

- Developed RESTful APIs with Node.js and implemented security using JWT and Google OAuth 2.0.
- Built real-time messaging via Socket.IO and a recommendation system using Python with Redis Vector Database.
- Integrated Stripe payment, order management, and optimized API performance via pagination and infinite scroll.

Technologies: Node.js (Express), Next.js, TypeScript, Python, MySQL, Redis, Socket.IO, JWT, Stripe API.
